

Full Stack Solution Developer, Investment Technology

Job Title: Full Stack Solution Developer

Department: Information Systems

Position Reports to: Solution Architect

Interacts more often with: Managers and data analysts from private equity and public security business units.

Main Purpose of the Role:

Working as a member of a medium-sized team, this role is responsible for all technical aspects of custom application development for one of the area's leading investment firms.

Key Responsibilities:

As a primary technical contributor, this person will be expected to:

- Identify and quickly get up to speed with any new technology that is deemed appropriate for solving the business problem at hand
- Split time equally between maintenance and enhancements for existing applications and development of new solutions
- Due to frequent direct interaction with the business unit leads, prior experience working in the field of investment management and finance is preferred
